

## **Using Befunge**

Before proceeding, ensure you are familiar with the instructions applicable to Befunge 93, as opposed to Befunge 98. The nuances between the two versions can affect program behavior significantly.

## **Reading Instructions**

Ensure you carefully read and understand the instructions that apply to Befunge 93. These instructions dictate how your Befunge program will be executed.

## **Specifying Input**

Write your instructions in a file and passed it via the command line argument as like the following format `dotnet run [FileName]`.

Ensure that the content follows the syntax and rules of Befunge 93.

For example, make sure the file contains at most 25 lines and each line contains at most 80 characters.

Feel free to choose the method that best fits your workflow and preferences.

# Programming 2 Project - Befunge interpreter
